Summary

Software Engineer with 8+ years of experience building large-scale applications that impact millions of users, focused on system architecture, scalability, reliability and AI-assisted development.

Experience

Mercado Libre

Argentina

SOFTWARE ENGINEER

Dec 2020- Present

SENIOR SOFTWARE ENGINEER

Mar 2024- Present

- Led the scalability redesign of the team’s asynchronous task orchestration system, consolidating duplicated flows across countries and products into a single model to sustain rapid growth of the card base; became the de facto owner of the two most critical backend services.
- Designed system architecture and authored technical RFCs, shifting from pure execution toward technical design; coordinated with other teams the discussions needed to move initiatives forward and drive the required changes, through RFCs, alignment meetings and ongoing cross-team collaboration.
- Implemented idempotency across card creation and cancellation flows, eliminating duplicate operations on retries and significantly reducing data-consistency incidents and customer support load.
- Drove recurring security hardening (dependency vulnerability remediation), migrated analytics pipelines to a data warehouse, and became an early adopter of AI tooling (Claude Code and AI agents) to speed up the entire team.

SEMI-SENIOR SOFTWARE ENGINEER

Dec 2021- Mar 2024

- Built analytics dashboards to measure user behavior, identifying improvement opportunities and working closely with the product team to define development goals.
- Refactored core areas of the codebase from the legacy promises format to async/await, improving readability and maintainability.
- Enhanced application security by finding and fixing code vulnerabilities.
- Migrated legacy applications to newer technologies.
- Delivered two internal tech talks proposing improvements, which were well received by the team.

JUNIOR SOFTWARE ENGINEER

Dec 2020- Dec 2021

- Built and shipped new product features with React.js and Node.js, improving user experience and reducing both the user contact rate and management costs.
- Developed an internal tool to build emails faster, increasing the team’s work speed by up to 50%.
- Wrote documentation and wiki pages covering processes, features and workflows.

ISSN Prepaid Health Insurance

Argentina

SOFTWARE ENGINEER

Oct 2017- Nov 2020

- Performed full-stack development of a virtual platform using React.js, Node.js, Express.js and PostgreSQL, allowing clients to visualize account balance and retirement contributions.
- Developed a full system from scratch to manage user payments.
- Migrated a monolithic application to distributed systems, improving maintainability, performance and reliability.

Projects

Greedspot

www.thegreedspot.com

PERSONAL PROJECT

- Real-time market terminal centered on the Wyckoff method, combining live multi-asset data, interactive charts and structured analysis workflows into a single workspace for discretionary trading research.
- Built entirely with AI (Claude Code, spec-driven development, multi-agent workflows, MCP) under my architectural direction — covering specs, design, implementation, code review and CI/CD.

Education

Cultural Inglesa Academy

ENGLISH COURSE

Neuquén, Argentina

Mar 2020- Mar 2024

San Ramon Institute

BACHELOR'S DEGREE

Buenos Aires, Argentina

Mar 2006- Dec 2011

Skills

AI & Productivity	Claude Code, Skill creation, Spec-Driven Development, Multi-agent workflows, MCP, n8n automation, GenAI tooling
Languages	JavaScript, TypeScript, Node.js, Go
Frontend	React.js, Next.js, GraphQL, shadcn/ui
Backend & Architecture	Express.js, Distributed & event-driven systems, RFC design, Idempotency & re-silience patterns
Data	BigQuery, PostgreSQL / MySQL, MongoDB, KVS
Observability & Quality	Datadog, New Relic, Kibana, OpenTelemetry, Jest.js, CI/CD, Load testing
Methodologies	Agile

Acknowledgments

- Promoted to Senior Software Engineer in recognition of my technical leadership, consistent high-quality delivery and positive impact on the team.
- Promoted to Semi-Senior Software Engineer, highlighting my daily effort, a proactive attitude and a positive energy.
- Obtained a scholarship to study English for having scored highest in the last course.
